

WATERFLUX 3070 Technical Datasheet

Battery powered electromagnetic water meter

- Battery driven with very low power consumption for remote locations
- Easy installation without straight inlet or outlet lengths
- IP68 rated signal converter for submersion in flooded chambers

1.1 The power of independence

The IFC 070 is a battery powered electromagnetic signal converter designed for use in combination with the WATERFLUX 3000 sensor. It is ideal for remote locations in the water industry where no power connection is available and provides certainty in case of power failure.

The strengths of the WATERFLUX 3070 lies in its unique flow sensor construction with a rectangular and reduced cross section and its efficient coil construction. The coils provide a stronger and more homogenous magnetic field, leading to an improved signal to noise ratio. The measurement is therefore independent of the flow profile and measurements are very stable. This results in a very good low flow performance.

Because of the unique WATERFLUX flow sensor design, whereby the mean flow velocity and flow profile are optimised within the rectangular and reduced cross section, the additional uncertainty for upstream disturbances is drastically reduced. The water meter can be installed directly behind an elbow or reducer in the pipe without straight inlet or outlet lengths. A substantial reduction of inlet and outlet sections means smaller measurement pits.

Another major benefit of the rectangular sensor construction is the very low power consumption of the signal converter. It has a long battery lifetime up to 15 years with two internal batteries and 20 years with an external battery pack.

- ① LCD Display
- ② Two optical keys to operate the converter without opening the housing
- ③ Battery powered signal converter

Highlights

- Stand alone water meter with battery lifetime up to 15 years
- Unique rectangular sensor construction results in good low flow performance and a large turndown ratio
- Large measuring range. High accuracy at peak flows during the day and at low flows during the night
- Certified to OIML R49 class 1 & 2 and MID Annex MI-001
- Standard inhouse wet calibration
- Optional verification to MID Annex MI-001 for water meters (Module B and D)
- No inlet or outlet sections required when installed e.g. behind an elbow or reducer (MID / OIML R49 certified)
- Bi-directional flow measurements
- Suitable for subsoil installation and constant flooding (IP68)
- Special subsoil coating for subsurface installation.
No need for measurement chambers
- Rilsan® polymer coating
- Drinking water approvals including ACS, DVGW, NSF, TZW and WRAS
- Reference electrode. No grounding rings needed
- Long term reliability and maintenance free.
No moving parts, no wear and no obstruction in the flow
- Optional KGA 42 external datalogger and GSM module for remote data transfer

Industries

- Water abstraction
- Distribution networks
- District metering
- Revenue metering
- Irrigation
- Dewatering

Applications

- Measurement of potable water
- Measurement of raw water and irrigation water
- Checking of pumps and water wells
- Monitoring of distribution networks
- Pipeline leak detection
- Water consumption and billing

1.2 Options

Remote or compact version

The WATERFLUX 3070 is available in a compact or a remote (field) version. The remote version of the signal converter can be installed on a wall or on a pipe. The functionality of the compact and the remote version is identical.

IP68 (NEMA 6P) version for submersion

The IFC 070 compact signal converter is available in an aluminium and in a polycarbonate housing.

The signal converter in a polycarbonate housing is suitable for submersion in flooded measurement chambers and is protected to IP68 / NEMA 6P. The output cable has plug and play IP68 rated connectors.

**Internal and external battery pack**

The WATERFLUX 3070 can be operated using 1 or 2 lithium monocell batteries or an external battery pack. The meter reading is saved internally, which ensures that there is no loss of data when changing the batteries.

The signal converter has a very low power consumption because of its rectangular sensor construction. With two internal batteries it has a battery lifetime up to 15 years.

**Maintenance free and buriable**

The flow sensor (IP68) is suitable for submersion in flooded measurement chambers. With its robust construction it can also be buried underground. This can be a major cost saving as it eliminates the need for a measurement chamber. To protect the flow sensor a special coating can be ordered as an option. The remote version has an IP68 stainless steel connection box.

**KGA 42 data logger and GSM module for remote reading**

The KGA 42 data logger and GSM module offers an efficient solution for remote reading of water meters and the transmission of data via wireless communication. The KGA 42 sends out SMS/GPRS reports on a daily basis or direct SMS/GPRS alerts to maintenance personnel. The module is easy to install, waterproof (IP68), has a built-in dedicated antenna and operates on batteries.

It is ideal for water meters at remote locations in the drinking water distribution networks or sites difficult to reach such as metering manholes below the ground

1.3 Measuring principle

An electrically conductive fluid flows inside an electrically insulated pipe through a magnetic field. This magnetic field is generated by a current, flowing through a pair of field coils. Inside of the fluid, a voltage U is generated:

$$U = v * k * B * D$$

in which:

v = mean flow velocity

k = factor correcting for geometry

B = magnetic field strength

D = inner diameter of flow meter

The signal voltage U is picked off by electrodes and is proportional to the mean flow velocity v and thus the flow rate q . A signal converter is used to amplify the signal voltage, filter it and convert it into signals for totalising, recording and output processing.

- ① Induced voltage (proportional to flow velocity)
- ② Electrodes
- ③ Magnetic field
- ④ Field coils

Rectangular cross section

The minimal height of the measuring tube decreases the distance between the field coils (4), resulting in a stronger and more homogeneous magnetic field (3). In addition, the mean flow velocity v increases due to the rectangular and reduced cross section. The large electrode spacing (D) and the increased flow velocity results in a higher magnetic signal voltage, also in the presence of a low flow rate.

2.1 Technical data

- The following data is provided for general applications. If you require data that is more relevant to your specific application, please contact us or your local representative.
- Additional information (certificates, special tools, software,...) and complete product documentation can be downloaded free of charge from the website (Download Center).

Measuring system

Measuring principle	Faraday's law of induction
Application range	Electrically conductive fluids
Measured value	
Primary measured value	Flow velocity
Secondary measured value	Volume flow

Design

Features	Unique rectangular flow tube design providing improved flow profile and signal to noise ratio resulting in highest accuracy, low energy consumption and large turndown ratio
	Rilsan® polymer coated flow tube approved for drinking water
	No internal or moving parts
	Built-in reference electrode
	Self providing energy by batteries for up to 15 years
Modular construction	The measurement system consists of a flow sensor and a signal converter. It is available as compact and as separate version.
Compact version	With IFC 070 converter: WATERFLUX 3070 C
Remote version	In field (F) version with IFC 070 converter: WATERFLUX 3070 F
	Cable length up to 25 m / 75 ft
Nominal diameter	DN25...300 / 1...12"
Display and user interface	
Display	LCD display, 8 digits
Operation	2 optical keys to navigate through the menu of the signal converter without opening the housing.
Display information	Standard:
	Sum counter (default), forward counter, reverse counter or flow rate
	Flow direction (forward or reverse), counter settings
	Measured value
	Measuring unit
	Battery lifetime indicator
	Optional:
	Empty pipe, self test, display test, test mode, diameter, meter constant, software version, AMR mode, warning sign, multiplier
Remote reading	Optional: KGA 42 external data logger / GSM module

Measurements

Measuring units	Volume
	Default setting: m ³
	Selectable: litre, gallon, imperial gallons, cubic feet, acre inch, acre feet
	Flow rate
	Default setting: m ³ / hr
	Selectable: litre/sec, gallon/min, imperial gallon/min, cubic feet/hour, acre inch/day, acre feet/day
Measurement interval	Default setting: 15s
	Selectable: 1s, 5s, 10s, 15s, 20s
Empty pipe detection	Optional: display shows - EP - in case of empty pipe detection
Low flow cut off	Measurements below this value are neglected
	Default setting: 10 mm/s
	Selectable: 0 mm/s, 5 mm/s, 10 mm/s

Measuring accuracy

Reference conditions	Flow conditions: similar to EN 29104
	Temperature: +10...30°C / +50...68°F
	Electrical conductivity: > 300 µS/cm
Maximum measuring error	Down to 0.2% of the measured value ± 0.5 mm/s
	The maximum measuring error depends on the installation conditions.
	For detailed information refer to <i>Measurement accuracy</i> on page 21.
Repeatability	±0.1% (v > 0.5 m/s / 1.5 ft/s)
Calibration / Verification	Standard:
	Each meter is standard calibrated by a direct volume comparison.
	Optional:
	Verification to Measurement Instrument Directive (MID), Annex MI-001. Standard: Verification at Ratio (Q3/Q1) = 80 Optional: Verification at Ratio (Q3/Q1) > 80 on request
MID MI-001 (Directive 2004/22/EC)	EC-Type examination certificate to MID Annex MI-001
	Diameter: DN25...300
	Minimum straight inlet flow: 0 DN
	Minimum straight outlet flow: 0 DN
	Forward and reverse (bi-directional) flow
	Orientation: any
	Ratio (Q3/Q1): 400
	Liquid temperature range: +0.1°C / 50°C
	Maximum operating pressure: ≤ DN200: 16 bar, ≥ DN250: 10 bar
	For detailed information refer to <i>Legal metrology</i> on page 16.

OIML R49	Certificate of conformity to OIML R49
	Diameter: DN25...300
	Accuracy: Class 1 and 2
	Minimum straight inlet flow: 0 DN
	Minimum straight outlet flow: 0 DN
	Forward and reverse (bi-directional) flow
	Orientation: any
	Ratio (Q3/Q1): up to 400
	Liquid temperature range: +0.1°C / 50°C
	Maximum operating pressure: ≤ DN200: 16 bar, ≥ DN250: 10 bar
	For detailed information refer to <i>Legal metrology</i> on page 16.

Operating conditions

Temperature	
Process temperature	-5...+70°C / +23...+158°F
Ambient temperature	-40...+65°C / -40...+149°F
	Ambient temperatures below -25°C / -13°F may affect the readability of the display.
	It is recommended to protect the converter from external heat sources such as direct sunlight because high temperatures reduce the lifecycle of all electronic components.
Storage temperature	-50...+70°C / -58...+158°F
Measurement range	
	-12...12 m/s / -40...40 ft/s
Starting flow	From 0 m/s / 0 ft/s onwards
Pressure	
EN 1092-1	Standard:
	DN25...200: PN 16
	DN250...300: PN 10
	Optional:
	DN250...300: PN16
ASME B 16.5	1...12": 150 lb RF
JIS	DN25...300: 10 K
Vacuum load	0 mbar / 0 psi absolute
Pressure loss	For detailed information refer to <i>Pressure loss</i> on page 25.
Chemical properties	
Physical conditions	Water: drinking water, raw water, irrigation water. For salt water, please contact your local representative.
Electrical conductivity	≥ 20 µS/cm

Installation conditions

Installation	Assure that flow sensor is always fully filled.
	For detailed information refer to <i>Installation</i> on page 27.
Flow direction	Forward and reverse
	Arrow on flow sensor indicates forward flow direction.
Inlet run	≥ 0 DN
	For detailed information refer to <i>Measurement accuracy</i> on page 21.
Outlet run	≥ 0 DN
	For detailed information refer to <i>Measurement accuracy</i> on page 21.
Dimensions and weights	For detailed information refer to <i>Dimensions and weights</i> on page 23.

Materials

Sensor housing	Sheet steel
Measuring tube	DN25...200: metallic alloy
	DN250....300: stainless steel
Flanges	Steel 1.0460 / 1.0038 (RSt37-2) (Wetted parts nickel plated)
Liner	Rilsan®
Protective coating	On exterior of the meter: flanges, housing, signal converter (compact version)
	Standard: polyurethane coating
	Option: subsoil coating
Measuring electrodes	Standard: stainless steel 1.4301 / AISI 304
	Optional: Hastelloy® C
Reference electrode	Standard: stainless steel 1.4301 / AISI 304
	Optional: Hastelloy® C
Grounding rings	Grounding rings can be omitted when the reference electrode is used.
Signal converter housing	Standard:
	Aluminium with a polyester topcoat
	Optional:
	Polycarbonate (IP68)
Connection box	Only for remote versions.
	Stainless steel (IP68)

Process connections

EN 1092-1	Standard:
	DN25...200: PN16
	DN250...300: PN10
	Optional:
	DN250...300: PN16
ASME	1...12": 150 lb RF
JIS	DN25...300: 10 K
AS 4087 Class 14 AS 2129 Table D & E	DN250...300: on request
	For detailed information on nominal flange pressure and nominal diameter refer to <i>Dimensions and weights</i> on page 23.
Other connections	
Thread	DN25: G1" thread connection on request
	DN40: G1.5" & G2" thread connection on request
Other	Weld-on, clamp, oval flanges: on request

Electrical connections

Cable connections	
Cable entries	IFC 070 C and F in aluminium housing (IP67)
	Standard: 2 x M20 x 1.45
	Optional: 1/2" NPT, PF1/2
Output cable	IFC 070 C in polycarbonate housing (IP68)
	Standard: No output connector. Pulse output not available. Note: output connector can not be added afterwards.
	Optional: Pulse output activated. Output cable with plug and play - IP68 rated connector
Power supply	
Battery	Standard:
	Internal battery pack: Single D-cell (Lithium, 3.6V, 19 Ah)
	Optional:
	Internal battery pack: Dual D-cell (Lithium, 3.6V, 38 Ah) External battery pack: Dual DD-cell (Lithium, 3.6V, 76 Ah), IP68 rated. Cable length is 1.5 m
Typical lifetime	Up to 8 years with 1 internal battery
	Up to 15 years with 2 internal batteries
	Up to 20 years with external battery pack
	For detailed information refer to <i>Battery lifetime</i> on page 26.
Alarms	Pre-alarm at < 10% of its original capacity
	Final alarm at < 1% of its original capacity
Battery replacement	No loss of totalizer data

Signal cable (remote versions only)	
Type	KROHNE WSC cable
Length	Standard: 5m
	Optional: 10m, 15m, 20m, 25m
In- and output	
Pulse output	2 Passive pulse outputs (maximum 3 outputs possible; see note at status output)
	$f \leq 100 \text{ Hz}$; $I \leq 10 \text{ mA}$; $U: 2.7 \dots 24 \text{ VDC}$ ($P \leq 100 \text{ mW}$)
	Volume / pulse is programmable
	Phase shift between pulse A and B (forward and reverse) selectable
	Pulse width is selectable: 5 ms (default), 10 ms, 20 ms, 50 ms, 100ms, 200 ms
Status output	2 Passive status outputs (1 status output can be used as a third pulse output)
	$I \leq 10 \text{ mA}$; $U: 2.7 \dots 24 \text{ VDC}$ ($P \leq 100 \text{ mW}$)
	Function (selectable): self check, battery pre warning, battery final warning, empty pipe
Communication	Optional: KGA 42 external datalogger / GSM module
	For detailed information refer to the KGA 42 documentation.

Approvals and certificates

CE	
	This device fulfils the statutory requirements of the EC directives. The manufacturer certifies successful testing of the product by applying the CE mark.
Electromagnetic compatibility	Directive: 2004/108/EC
	Harmonized standard: EN 61326-1: 2006
Low voltage directive	Directive: 2006/95/EC
	Harmonized standard: EN 61010: 2001
Other approvals and standards	
Custody transfer	MID Annex MI-001 type examination certificate
	OIML R49 certificate of conformity
	Conformity with ISO 4064 and EN 14541
	Innerstaatliche Bauartzulassung als Kaeltezaehler (For Germany and Switzerland)
Protection category acc. to IEC 529 / EN 60529	Compact version (C) in polycarbonate housing: IP68 (NEMA 4X/6P)
	Compact version (C) in aluminium housing: IP66/67 (NEMA 4/4X/6)
	Field version (F) in aluminium housing: IP66/67 (NEMA 4/4X/6)
Drinking water approvals	ACS, DVGW W270, NSF / ANSI Standard 61, TZW, WRAS
Shock test	IEC 68-2-27
Vibration test	IEC 68-2-64

2.2 Legal metrology

2.2.1 OIML R49

The WATERFLUX 3070 has a certificate of conformity with the international recommendation OIML R49. The certificate has been issued by NMI.

The OIML R49 recommendation (2006) concerns water meters intended for the metering of cold potable and hot water. The measuring range of the water meter is determined by Q_3 (nominal flow rate) and R (ratio).

The WATERFLUX 3070 meets the requirements for water meters of accuracy class 1 and 2.

- For accuracy class 1, the maximum permissible error for water meters is $\pm 1\%$ for the upper flow rate zone and $\pm 3\%$ for the lower flow rate zones.
- For accuracy class 2, the maximum permissible error for water meters is $\pm 2\%$ for the upper flow rate zone and $\pm 5\%$ for the lower flow rate zones.

According to OIML R49, accuracy class 1 designation shall be applied only to water meters with $Q_3 \geq 100 \text{ m}^3/\text{h}$.

$$Q_1 = Q_3 / R$$

$$Q_2 = Q_1 * 1.6$$

$$Q_3 = Q_1 * R$$

$$Q_4 = Q_3 * 1.25$$

Figure 2-1: ISO flow rates added to figure as comparison towards OIML

X: Flow rate; Y [%]: Maximum measuring error

- ① Upper flow rate zone: $\pm 3\%$ (class 1), $\pm 5\%$ (class 2)
- ② Lower flow rate zone: $\pm 1\%$ (class 1), $\pm 2\%$ (class 2)

2.2.2 MID Annex MI-001

All new designs of water meters that are to be used for legal purposes in Europe require certification under the Measurement Instrument Directive (MID) 2004/22/EC. Annex MI-001 of the MID applies to water meters intended for the measurement of volume of clean, cold or heated water in residential, commercial, and light industrial use. An EC-type examination certificate is valid in all countries of the European Union.

The WATERFLUX 3070 has an EC-type examination certificate and can be verified to the MID Annex MI-001 for water meters with diameter DN25...DN300. The conformity assessment procedure followed for the WATERFLUX 3070 is Module B (Type Examination) and Module D (Quality Assurance of the Production Process).

The maximum permissible error on volumes delivered between Q2 (transitional) flow rate and Q4 (overload) flow rate is $\pm 2\%$.

The maximum permissible error on volumes delivered between Q1 (minimum) flow rate and Q2 (transitional) flow rate is $\pm 5\%$.

$$Q1 = Q3 / R$$

$$Q2 = Q1 * 1.6$$

$$Q3 = Q1 * R$$

$$Q4 = Q3 * 1.25$$

2.3 Measurement accuracy

Each water meter is standard wet calibrated under reference conditions by direct volume comparison. The performance of the water meter is defined and documented in an individual water meter calibration certificate.

Reference conditions

- Medium: water
- Temperature: +10...30°C / +50...86°F
- Operating pressure: 1 bar / 14.5 psig

2.3.1 WATERFLUX 3070 with straight inlet and outlet sections

Figure 2-3: Measuring accuracy
X [m/s]: Flow velocity; Y [%]: Maximum measuring error

	Inlet	Outlet	Accuracy	Curve
DN25...300 / 1...12"	3 DN	1 DN	0.2% + 0.5 mm/s	①

2.3.2 WATERFLUX 3070 without straight inlet and outlet sections

Disturbed flow profiles, such as those that occur behind elbows, tee pieces, reducers or valves installed in front of a water meter, affect the measuring performance. Therefore it is usually recommended to fit a straight inlet length in front of and straight outlet length behind a water meter.

As a result of the unique WATERFLUX flow sensor design, whereby the mean flow velocity and flow profile are optimised within the rectangular and reduced cross section, the additional uncertainty for upstream disturbances are drastically reduced. Therefore the requirements for straight length and in front of and behind a meter are reduced.

The NMI has performed tests with various flow and swirl disturbers according to ISO 4064 and EN 14154. Based on these results the WATERFLUX 3070 has received a

OIML R49 certificate

- Diameter range DN25...300
- Accuracy class 1 and class 2
- Minimum straight inlet and outlet pipe length of 0 DN
- Bi-directional flow

EC-type certificate according MID Annex MI-001

- Diameter range DN25...300
- Minimum straight inlet and outlet pipe length of 0 DN
- Bi-directional flow

2.4 Dimensions and weights

Compact version in aluminium housing (IP67)		<div>a = 170 mm / 6.7"</div> <div>b = 132 mm / 5.2"</div> <div>c = 140 mm / 5.5"</div> <div>Total height = H + a</div>
Compact version in polycarbonate housing (IP68)		<div>a = 159 mm / 6.3"</div> <div>b = 161 mm / 6.3"</div> <div>Total height = H + a</div>
Remote flow sensor		<div>a = 77 mm / 3.1"</div> <div>b = 139 mm / 5.5" ①</div> <div>c = 106 mm / 4.2"</div> <div>Total height = H + a</div>
Remote version in aluminium housing (IP67)		<div>b = 132 mm / 5.2"</div> <div>c = 235 mm / 9.3"</div> <div>H = 310 mm / 12.2"</div> <div>Weight = 3.3 kg / 7.3 lb</div>

① The value may vary depending on the used cable glands.

- All data given in the following tables are based on standard versions of the sensor only.
- Especially for smaller nominal sizes of the sensor, the converter can be bigger than the sensor.
- Note that for other pressure ratings than mentioned, the dimensions may be different.
- For full information on converter dimensions see relevant documentation.

EN 1092-1

Nominal size DN [mm]	Dimensions [mm]			Approx. weight [kg]
	L	H	W

2.6 Battery lifetime

The typical battery lifetime depends on the choice of battery pack and on the measurement interval. The maximum battery lifetime with a sampling frequency of 15 seconds is:

- 8 years with an internal single D-cell battery pack
- 15 years with an internal dual D-cell battery pack

Other factors influencing the battery lifetime include the ambient temperature, the output settings, the status output, pulse width and the diameter.

Typical lifetime of batteries (at 25°C) for a DN80

Figure 2-6: X = Measuring interval in seconds, Y = typical lifetime in years

- ① Dual D-cell battery
- ② Single D-cell battery

3.1 Notes on installation

Inspect the cartons carefully for damages or signs of rough handling. Report damage to the carrier and to the local office of the manufacturer.

Do a check of the packing list to make sure that you have all the elements given in the order.

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

3.2 Intended use

Responsibility for the use of the measuring devices with regard to suitability, intended use and corrosion resistance of the used materials against the measured fluid lies solely with the operator.

The manufacturer is not liable for any damage resulting from improper use or use for other than the intended purpose.

The **WATERFLUX 3070** is designed exclusively to measure the flow of drinking water, raw water and irrigation water.

If the device is not used according to the operating conditions (refer to chapter Technical data), the intended protection could be affected.

3.3 Pre-installation requirements

Make sure that you have all necessary tools available:

- Allen key (4 mm)
- Small screwdriver
- Wrench for cable glands
- Wrench for wall mounting bracket (remote version only)
- Torque wrench for installing flowmeter in pipeline

3.4 Installation conditions

3.4.1 General requirements

The following precautions must be taken to ensure reliable installation.

- *Make sure that there is adequate space to the sides.*
- *Protect the signal converter from direct sunlight and install a sun shade if necessary.*
- *Signal converters installed in control cabinets require adequate cooling, e.g. by fan or heat exchanger.*
- *Do not expose the signal converter to intense vibration. The flowmeters are tested for a vibration level in accordance with IEC 68-2-64.*

3.4.2 Inlet and outlet

Figure 3-1: Recommended inlet and outlet

- ① Inlet: ≥ 0 DN
- ② Outlet: ≥ 0 DN

3.4.3 Vibration

Figure 3-2: Avoid vibrations

3.4.4 Mounting position and flange deviation

Figure 3-3: Mounting position and flange deviation

- ① L_{max}
- ② L_{min}

- Mount sensor either with converter aligned upwards or downwards.
- Install sensor in line with the pipe axis.
- Pipe flange faces must be parallel to each other.

Max. permissible deviation of pipe flange faces: $L_{max} - L_{min} \leq 0.5 \text{ mm} / 0.2''$.

3.4.5 T-section

Figure 3-4: Distance behind a T-section

- ① $\geq 0 \text{ DN}$

3.4.6 Magnetic field

① ≥ 5 m

② Air ventilation point

3.4.11 Pump

Figure 3-11: Recommended installation: after pump

3.4.12 IP68

The WATERFLUX 3000 flow sensor is rated IP68 (NEMA 4X/6P). It is suitable for submersion in flooded measurement chambers and for subsurface installation.

The compact IFC 070 signal converter is available in:

- an aluminium housing suitable for IP66/67, NEMA 4/4X/6
- a polycarbonate housing suitable for IP68, NEMA 4/4X/6.
This version is suitable for periodic submersion in flooded measurement chambers. The output cable has IP68 rated (military) connectors.
In case of continuous or long term submersion it is advised to select the field (remote) version (IP66/67). Submersion under water is possible down to a depth of 5 meters.

The remote IFC 070 signal converter is available in:

- an aluminium housing suitable for IP66/67, NEMA 4/4X/6.

Figure 3-12: IP68 versions

- ① Submersible
- ② Buried

3.5 Mounting

3.5.1 Torques and pressures

The maximum pressure and torques values for the flowmeter are theoretical and calculated for optimum conditions and use with carbon steel flanges.

Figure 3-13: Tightening of bolts

Tightening of bolts

- Always tighten the bolts uniformly and in diagonally opposite sequence.
- Do not exceed the maximum torque value.
- Step 1: Apply approx. 50% of max. torque given in table.
- Step 2: Apply approx. 80% of max. torque given in table.
- Step 3: Apply 100% of max. torque given in table.

Nominal size DN [mm]	Pressure rating	Bolts	Max. torque [Nm] ^①
25	PN 16	4 x M 12	12
40	PN 16	4 x M 16	30
50	PN 16	4 x M 16	36
65	PN 16	4 x M 16	50
80	PN 16	8 x M 16	30
100	PN 16	8 x M 16	32
125	PN 16	8 x M 16	40
150	PN10	8 x M20	55
150	PN 16	8 x M 20	55
200	PN 10	8 x M 20	85
200	PN 16	12 x M20	57
250	PN 10	12 x M 20	80
250	PN 16	12 x M 24	100
300	PN 10	12 x M 20	95
300	PN 16	12 x M 24	136

① The torque values also depend on variables (temperature, bolt material, gasket material, lubricants, etc.) outside the control of the manufacturer. Therefore these values should be regarded as indicative only.

Nominal size [inches]	Flange class [lb]	Bolts	Max. torque [lbs.ft] ^①
1	150	4 x 1/2"	4
1½	150	4 x 1/2"	11
2	150	4 x 5/8"	18
2.5	150	4 x 5/8"	27
3	150	4 x 5/8"	33
4	150	8 x 5/8"	22
5	150	8 x 3/4"	33
6	150	8 x 3/4"	48
8	150	8 x 3/4"	66
10	150	12 x 7/8"	74
12	150	12 x 7/8"	106

① The torque values also depend on variables (temperature, bolt material, gasket material, lubricants, etc.) outside the control of the manufacturer. Therefore these values should be regarded as indicative only.

3.6 Mounting of the field housing, remote version

Assembly materials and tools are not part of the delivery. Use the assembly materials and tools in compliance with the applicable occupational health and safety directives.

3.6.1 Pipe mounting

Figure 3-14: Pipe mounting of the field housing

- ① Fix the signal converter to the pipe.
- ② Fasten the signal converter using standard U-bolts and washers.
- ③ Tighten the nuts.

3.6.2 Wall mounting

No special requirements.

3.7 Mounting of the IP68 version

Figure 3-15: Closing of IP68 housing

- Before closing the case of the converter, ensure that all surfaces in contact with the seals are clean.
- Position the upper part of the case and tighten the lock ring.
- Use the wrench to tighten the ring as shown.

4.1 Safety instructions

All work on the electrical connections may only be carried out with the power disconnected. Take note of the voltage data on the nameplate!

Observe the national regulations for electrical installations!

Observe without fail the local occupational health and safety regulations. Any work done on the electrical components of the measuring device may only be carried out by properly trained specialists.

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

4.2 Grounding

The device must be grounded in accordance with regulations in order to protect personnel against electric shocks.

Figure 4-1: Grounding

Grounding without grounding rings. The flow sensor is equipped with a reference electrode.

4.3 Connection of the signal cable

4.3.1 IP 67 housing (field version)

To ensure smooth functioning, always use the signal cables included in the delivery.

The signal cable is only used for remote versions. The standard WSC-cable includes both electrode and field current leads.

Figure 4-2: Preparation of standard cable (both sides)

- ① Shielding
- ② Blue + green + yellow cable, used for field current (terminals 7, 8, 9)
- ③ Brown + white + violet cable, used for electrode signals (terminals 1, 2, 3)
- ④ Drain wires

Dimensions of cable

	a	b	c	d	e	f
mm	75	35	70	5	45	30
inch	3.0	1.4	2.8	0.2	1.8	1.2

Figure 4-3: Cable connection at sensor side, standard cable

- ① Connect drain wires under screw
- ② Connect shielding under clamp

Figure 4-4: Cable connection at converter side, standard cable

- ① Connect drain wires under screw
- ② Connect shielding under clamp

- Prepare appropriate cable lengths as shown.
- Connect the wires as shown in the following table.

Wire color	Terminal	Function
Brown	1	Reference electrode
White	2	Standard electrode signal
Violet	3	Standard electrode signal
Blue	7	Field current
Green	8	Field current
Yellow	9	No function
Drain wires	Screws	Shielding

4.4 Connection of the output cable

4.4.1 IP67 housing (compact and field version)

Figure 4-5: Removing side cap

Figure 4-6: Terminal assignment

- ① Status output 1 or pulse output C
- ② Status output 2
- ③ Not used
- ④ Common ground
- ⑤ Pulse output A
- ⑥ Pulse output B

Electrical values

- **Pulse output passive:**
 $f \leq 100 \text{ Hz}$; $I \leq 10 \text{ mA}$; $U: 2.7 \dots 24 \text{ VDC}$ ($P \leq 100 \text{ mW}$)
- **Status output passive:**
 $I \leq 10 \text{ mA}$; $U: 2.7 \dots 24 \text{ VDC}$ ($P \leq 100 \text{ mW}$)

4.4.2 IP68 housing (compact version)

Figure 4-7: Output cable at IP68 compact version

① Color coded leads of output cable

If an output is activated, the output cable with the IP68 rated connector has the following leads:

Wire color	Contact on connector	Function
Yellow	A	Status output 1
White	G	Status output 2
Blue	H	Ground
Brown	B	Pulse output A
Green	F	Pulse output B
Pink	C	External battery +
Grey	E	External battery -

Electrical values

- **Pulse output passive:**
 $f \leq 100 \text{ Hz}$; $I \leq 10 \text{ mA}$; $U: 2.7 \dots 24 \text{ VDC}$ ($P \leq 100 \text{ mW}$)
- **Status output passive:**
 $I \leq 10 \text{ mA}$; $U: 2.7 \dots 24 \text{ VDC}$ ($P \leq 100 \text{ mW}$)
